The species *Attagenus incognitus* Háva, 2003 was described by the first author from Spain (Madrid, Palencia) (Háva 2003), from where it's also known from Extremadura (Sáez Bolaño *et al.* 2013). In the present article this species is firstly reported from Switzerland due to recent observations.

Attagenus incognitus Háva, 2003 (Fig. 1, Map. 1)

Switzerland: Vevey, 46°27'5.61" N 6°50'32.37" E, 13.7.2013, one single specimen observed and pictured from multiple angles by P. Bornand.

Distribution: Species known from Spain (Háva 2003; Sáez Bolaño *et al.* 2013). New species for Switzerland.

Remarks: Specimen observed on Umbelliferae on the banks of a river full of flowers with buildings on the other side. It was a warm, sunny day and there were several Dermestidae nearby, especially a few *Anthrenus fuscus* Olivier, 1789.
